

Problem & Solution

The financial system with its fiat money is currently facing various challenges such as frictions, large overhead costs and lack of speed. Indeed many people start questioning if this system can cope with today's dynamic business environment. As a consequence cryptocurrencies such as Bitcoin have emerged as new alternatives. Unfortunately cryptocurrencies prove to be extremely volatile, which limits its use in terms of medium of exchange, store of value and unit of account.

MONEY on CHAIN solves this volatility problem. We offer a **Bitcoin-Collateralized Stablecoin** using a two token system. The undesired volatility of Bitcoin will be stripped into two separate currencies:

-  **TPro** Tokens for risk Propense individuals
-  **DoC** Dollar on Chain, for risk averse individuals

Why our Stablecoin?

With many ICOs around these days, we provide an unique, attractive opportunity.

Collateral: There are other Stablecoins projects, but none is Bitcoin- Collateralized.

Model: Our Risk propense/averse model is simple, and unique.

Demand on the Bitcoin Community: There is a strong demand for this solution in the Bitcoin Ecosystem.

Technology: First massive use of RSK technology.

Regulation and counterparty risk: It will not be holding the Cryptocurrency from any user. There will be a counterparty risk.

Security: will be provided by Bitcoin Miners.
